

High-Temperature Grommets

These silicon rubber high-temperature grommets withstand temperatures of -60 to +500 degrees F — about twice as much as standard grommets. Use them to protect wires, cables and cords and turn uneven, rough-edged holes into smooth ones. They are flexible and push into place.

These grommets meet MIL-G-3036 and resist hot petroleum-based oil and coolant. They also meet MS-35489, AN930 and AN931 and adhere to military dimensional standards.

	"A" Hole Diameter	"B" Material thickness	"C" ID	"D" OD	"E" Height
